Organ Needles for Embroidery

DBxK5 <i>Standard</i>	This is the standard large eye embroidery needle. It's eye is approximately 25% larger than the eye of a DBx1 needle. It is available in Chrome, Cool-Sew (CS/LP) and Titanium (PD) finish; in Sharp point, Ball point and SS or SD1 Leather points.
DBxK5 NY <i>Tapered Blade</i>	This is the tapered blade version of the DBxK5 needle. It is made with a continuous taper from the shank to the eye. The tapered blade makes the needle more rigid for less deflection. Ideal to avoid skipped stitches especially in tough material. A thinner NY needle will have the rigidity of a thicker "standard" needle. It is available in Chrome with a Sharp or a Ball Point.
DBxK5 Q1 <i>4 needle machine</i>	This needle was made for the Janome MB4 and Melco EP4 machines. It has a long extended groove, longer deeper scarf, NY tapered blade and a slim extra light ball point.
DBxK5 Z1 <i>Good for Foam</i>	This is the needle that comes with the latest machines from Tajima. It has a side scarf, long extended groove, longer deeper scarf and a slim extra light ball point. It helps avoid skipped stitches and is great for embroidering with foam. It is available in chrome or PD /titanium.
DBxK23 <i>Fine Lettering</i>	This is the large eye, embroidery version of the DBx1KN. It has a special slim point for fine knits that starts to taper at the top of the eye not the bottom. This reduces penetration resistance as well as stress and distortion of the fabric.
DBx7ST <i>Metallic</i>	This needle is designed specifically for metallic threads. It has a long rectangular eye.
DBx9ST <i>XXL Eye, Ball Point</i>	When the large eye of a DBxK5 is not large enough this needle has a two sizes larger eye. The eye of a DBx9ST #9/65 is at least as large as the eye of a DBx1 #12/80.
SS Leather Point <i>Extra narrow wedge</i>	An extra narrow wedge point for leather and other non-woven materials.
SD1 Leather Point <i>Round tri-tip</i>	For tight stitch patterns on fine leather and other non-woven materials.
PD Perfect Durability <i>Titanium</i>	PD/Perfect Durability (gold colored) needles are more resistant to wear. If you are changing needles because the points are wearing down, the PD finish needles will give you 3 to 5 times longer life.

*Organ Needle Company makes the largest variety of needles for embroidery
 Diamond Needle stocks the largest selection.*

You've got the need, we've got the needle!
